

# GRANITE

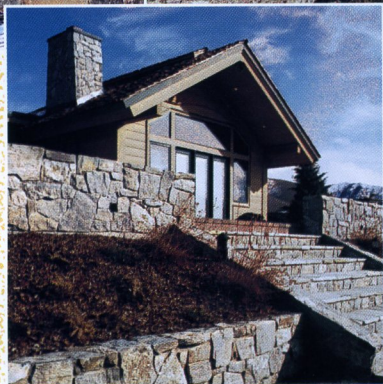

## A CLASSIC CHOICE

Step up to a fresh new look with granite veneer.

Capture the timeless elegance, classical beauty and enduring strength associated with granite.

A natural stone with neutral colors and subtle texture, our granite veneer meets the challenges of today's architecture and landscape design.

Comfortable to live with, always in style. Rocky Mountain granite veneer.

# ROCKY MOUNTAIN GRANITE®

## HIGH DESERT SAGE

**ROCKY MOUNTAIN GRANITE** is a Granitic Gneiss with a hardness of 6 to 7 on the mohs scale. This is the same hardness as our Rocky Mountain Quartzite, which makes it ideally suited for installation in the most severe freeze-thaw situations.

**ROCKY MOUNTAIN GRANITE** has many unusual and valuable characteristics. It can be split and trimmed to minimum veneer specifications. This allows for greater-than-average coverage, thereby lowering material and labor costs. The bedding surfaces of the stone have relatively straight, parallel and flat edges and our trained quarry workers handwork each piece to ensure that the product will arrive at the jobsite ready to be installed in the wall with a minimum of additional trimming.

The color range of the stone is subtle and neutral, blending with almost any design and color theme. The colors are truly those of the sage that is so prevalent in the deserts and mountains of Idaho.

The stone's surface is textured and flecked gray with a hint of gray-green, as in the sage leaf. Occasionally it will be lightly stained by iron oxides and have white quartz intrusions and mica flecks that lend a beautiful, yet subtle highlight to the stone.

GRADE/APPROX. DIMENSIONS	APPROX. COVERAGE SQ. FT. PER TON
2" - 4" thick, 1/2 to 2 sq. ft. surface dimension, splitface, random-shape veneer.	50 - 60
1" - 2" thick, 1/2 to 2 sq. ft. surface dimension, splitface, random-shape veneer. (Limited availability product)	80 - 90

**LANDSCAPE BOULDERS** are available in sizes up to 3 tons. Boulders are typically blocky or rectangular in shape with 1 or 2 clean split faces and 1 or 2 natural seam faces that have a pleasing gray-green color. Many pieces have flat surfaces on one or more sides making them ideal for garden or pool-side seating stones.

**SPECIAL ORDERS** are no problem! We frequently quote on jobs requiring stone of special dimensions or thickness different than those listed above.

Our quarry operation is seasonal due to its high elevation and extreme winter weather. Pre-planning for larger jobs is essential.

In addition to Rocky Mountain Granite, we produce Rocky Mountain Quartzite in over 25 grades and 5 colors of beautiful flagstone, buildingstone and landscape stone from our quarries in Idaho and Utah. Please see your local dealer or contact us for information and samples.

*"We look forward to being of service on your important project."*
