

PAVERS | WALLS | OUTDOOR LIVING KITS

Building Values

For almost 40 years, Basalite® has worked on growing our business by building relationships. We have created strong bonds with our dealers, masons, architects, engineers and licensed contractors. From working together with the common purpose of installing the finest hardscape products available, we have seen our products placed in settings that range from practical to magical. At Basalite®, we are committed to being the best in the industry. Our focus now, just as it was when we opened our doors all those years ago, is on service, quality and innovation. Those are the values that have made us the industry leader we are today and the same principles that will guide us far into the future.

For design	For design consideration add 1.5mm or .06" to the W and L dimensions to allow for the spacers.							

THE EverBold®

The Sierra Collection with EverBold® stay-true technology enriches the paver color depth, extends color fastness over time, increases stain resistance, makes cleaning easier and has been laboratory proven to add UV protection that will keep your pavers looking like the day they were installed for many years.

Laboratory color results after pavers were exposed outdoors for over 3 years.

Without EverBold® With EverBold®

EverBold® improves resistance to acid rain which contributes to paver fading and general wear.

EverBold® protects against stains, like mustard, wine, ketchup and coffee as tested below.

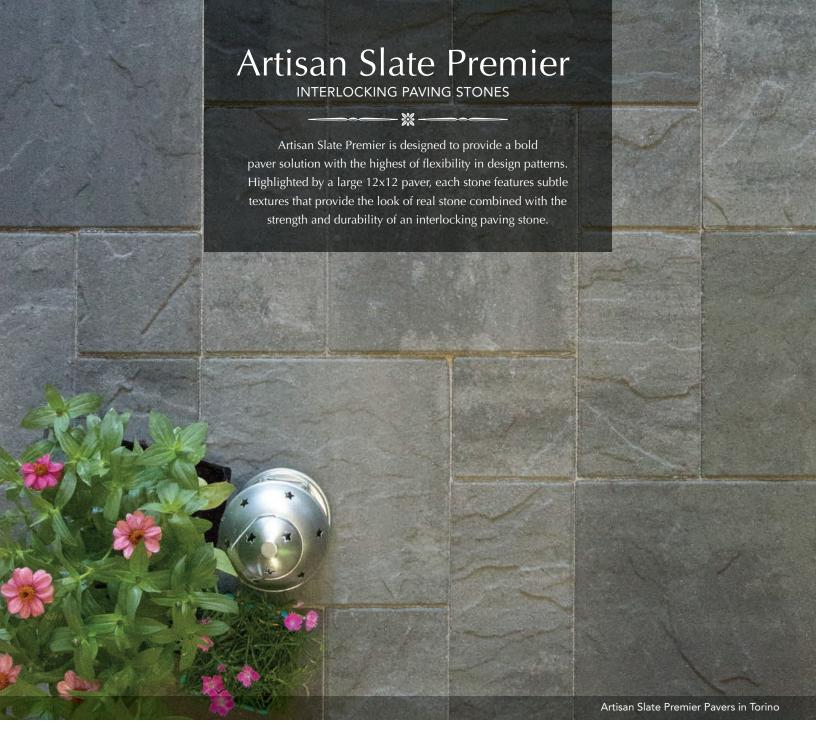

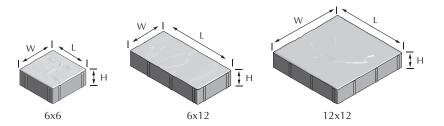

Without EverBold® With EverBold®

REALISTIC CHISELED **FACE DESIGN**

The chiseled face design and subtle color blends add to the look of natural stone.

GATOR MAXX G2

For residential or commercial applications. This new generation of intelligent polymers neutralizes haze and dust. No blower is needed and the intelligent polymeric sand requires only one watering. Recommended for a variety of uses. Available in Beige, Slate Grey, Ivory and Black Diamond.

GATOR SPACER

Gator Spacer provides uniform spacing and unparalleled horizontal and vertical stability to the Gator Tile system. Gator Block Bond XP penetrates into the rivet holes, adhering the Porcelain tile to the Gator Spacer, then hardens. Available in 3 sizes: joint widths of 1/8", 3/16", & 1/4"

SUPERSAND G2

For residential applications. This new generation of intelligent polymers neutralizes haze and dust. No blower is needed and the intelligent polymeric sand requires only one watering. Supersand G2 is recommended for a variety of uses including pool decks, patios, footpaths, driveways, parking spaces, pavements, etc. Available in Beige and Slate Grey.

GATOR EDGE FLEX AND RIGID

Made with 100% Polypropylene Copolymer giving this edging great strength and flexibility. Both the Rigid and Flex can be locked together with the "Twist & Lock" connection system. The Rigid could be transformed in a partial Flex by cutting the bridge support.

GATOR DUST POLYMERIC STONE DUST

For natural stone joints 1/2" to 6". It's ideal for pedestrian patios, walkways, pool decks and many more scenarios. Available in Beige or Grey.

GATOR BASE SCREWS

Fastening Gator Edge with the Gator Base Screws through the Gator Base reinforces the outside perimeter, creating a strong lateral support. Gator Base Screws are a required component on any Gator Base install.

GATOR AQUA PERMEABLE STONE

For permeable paver joints. It's ideal for driveways, parking lots, walkways, drainage applications, bedding and jointing material and more. Available in Grey.

GATOR NAILS

Alliance Gator Nails are high quality 10" common models. Gator Nails are designed for use with all Gator Edge types.

GATOR TILE POLYMERIC SAND

The only polymeric sand for outdoor porcelain tile with joint up to 1". Once set, becomes very firm and locks between the tile joints while still retaining flexibility and providing a long-lasting, durable jointing material. Available in Beige, Grey, Ivory or Black.

GATOR BLOCK XP XTRA POLYURETHANE ADHESIVE

XP XTRA performance polyurethane adhesive, low VOC is one of the strongest polyurethane adhesives on the market. It is specially formulated for overlays, pool copings, steps and wall caps, concrete pavers, wet cast, natural stones, retaining walls, masonry units and bricks.

GATOR BASE

Gator Base replaces concrete foundations and is engineered to replace 6" of crushed stone. The interlocking panels distribute all dynamic and static loads to a very wide area, practically eliminating any pressure on the ground.

GATOR BLOCK HP HIGH PERFORMANCE ADHESIVE

Gator Block Bond High Performance, low VOC is one of the best adhesives on the market. It is especially formulated for bonding concrete pavers, wet cast, natural stones, retaining walls, masonry units and bricks.

GATOR ROCK BOND LIQUID BINDING AGENT

Gator Rock Bond is a one component binder, that when mixed with clean and dry riverstone, granite, limestone or marble creates a durable yet solid permeable and decorative surface. Great for garden pathways where erosion and drainage is a concern.

GATOR HYBRID SEALER LOW GLOSS + COLOR ENHANCER

Gator Hybrid Sealer is an acrylic copolymer used to seal concrete pavers. It penetrates deep into the concrete paver pores, thus reducing the oil and dirt penetration, as well as protecting them from the corrosion of de-icing salt.

GATOR ROCK BOND ROCK AND BINDER KIT

Gator Rock Bond rock and binder kit is a one component binder, that when mixed with riverstone creates a durable yet solid permeable and decorative surface. Great for garden pathways where erosion and drainage is a concern.

GATOR HYBRID SEALER HIGH GLOSS +COLOR ENHANCER

Gator Hybrid Sealer is an acrylic copolymer used to seal concrete pavers. It penetrates deep into the concrete paver pores, thus reducing the oil and dirt penetration, as well as protecting them from the corrosion of de-icing salt.

GATOR STONE BOND LIQUID STONE STABILIZER

Gator Stone Bond liquid stone stabilizer is a unique blend of polymers designed to bind together a wide variety of small aggregates commonly referred to as decomposed granites (dg): pathway mixes, crusher runs, concrete sand, etc.

SIGNATURE GATOR SEAL NATURAL LOOK FINISH

This is a zero gloss, water-based sealer for natural stones made from fluorochemical polymers. A multipurpose sealer that penetrates deep into natural stones, concrete pavers, walls and masonry thus reducing the oil and dirt penetration, as well as protecting them from the corrosion of de-icing salt.

GATOR SEAL WET LOOK OR SATIN LOOK

Made from acrylic based polymers. Gator Satin Look or Wet Look sealer penetrates deep into the concrete paver, thus reducing the oil and dirt penetration, as well as protecting them from the corrosion of de-icing salt. Specifically formulated to be used on unsealed surfaces only.

SIGNATURE GATOR SEAL **ZERO GLOSS** +COLOR ENHANCER

Signature Gator Seal for Natural Stone is made of silicone based polymers. This sealer penetrates deep into the natural stone thus reducing the oil and dirt penetration, as well as protecting them from the corrosion of de-icing salt.

SHAMPOO

GATOR CLEAN EFFLORESCENCE CLEANER

Gator Efflorescence Cleaner will remove any efflorescence stains trapped in the concrete pavers, wet cast products and natural stone pores. It makes the surface look clean and vibrant without discoloring or damaging the surface.

GATOR CLEAN SHAMPOO

Gator Clean Shampoo removes ground-in dirt from the surface of concrete pavers, wet cast products and natural stones. It will make the pavers, patio slabs, walls & natural stones look clean and vibrant.

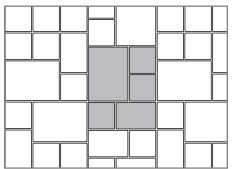

GATOR HYBRID SEALERS - ZERO GLOSS,

Gator Hybrid Seal is an acrylic copolymer used to seal concrete pavers. It penetrates deep into the concrete paver pores, thus reducing the oil and dirt penetration, as well as protecting them from the corrosion of de-icing salt.

Random 1

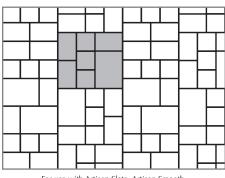

40% Mega, 20% Rectangle and 40% Square

For use with Artisan Slate, Artisan Smooth, Italian Renaissance and Artisan Cobblestone.

For use with Sierra Paver Collection.

Sierra Collection 4 Piece Pattern #2

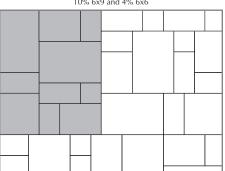

40% 12x18, 27% 12x12, 20% 9x12 and 13% 6x12

For use with Sierra Paver Collection.

Sierra Collection 6 Piece Pattern #1

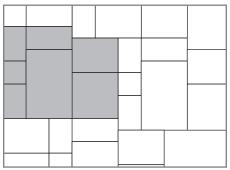

40% 12x18, 13% 12x12, 20% 9x12, 13% 6x12, 10% 6x9 and 4% 6x6

For use with Sierra Paver Collection.

Sierra Collection 6 Piece Pattern #2

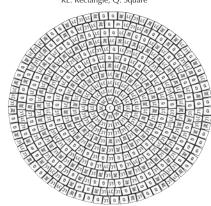

32% 12x18, 21% 12x12, 16% 9x12, 10% 6x12, 16% 6x9 and 5% 6x6

For use with Sierra Paver Collection.

Circle Kit

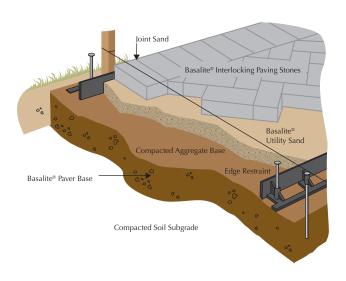

C: Center Stone, SC: Small Circle, LC: Large Circle, RE: Rectangle, Q: Square

*The installation instructions and illustrations shown are a basic overview of paver and wall installation methods. Because installation methods vary per product, please refer to the Basalite product specific installation guide, the Standard ICPI installation method, ICPI.org or visit www.basalite.com.

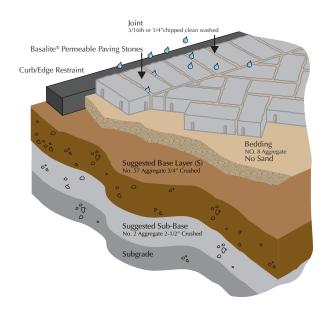

TYPICAL PAVER INSTALLATION*

- 1. Excavate unsuitable, unstable or unconsolidated subgrade material and compact the area which has been cleared. Backfill and level with dense graded aggregate suitable for base material (typically 3"-6" for pedestrian/light vehicular traffic and 8"-10" for driveway applications), or as otherwise directed by site engineer/architect/landscape architect.
- 2. Install edge restraint using concrete curb, concrete toe or edging.
- 3. Place bedding course of sharp, normal-weight screening or concrete sand to a uniform depth of approximately 1" leveled to grade.
- 4. Install Basalite Pavers hand tight with joints approximately 1/8". Where required, cut stones with an approved cutter to fit accurately.
- 5. Tamp pavers with mechanical vibrator, uniformly level, true to grade and free of movement. Textured pavers require a rubber pad for the vibrator to reduce scuffing.
- 6. Fill voids in joints by sweeping dry, fine, sharp sand over pavers.

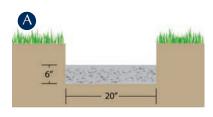

PERMEABLE PAVER INSTALLATION*

- 1. Excavate unsuitable, unstable or unconsolidated subgrade material and compact the area in accordance to ICPI guidelines. Backfill and level Sub-base with No. 2 aggregate 2-1/2" crushed. Backfill and level base layer with No. 57 aggregate 3/4" crushed. The joint material and the foundation (paver bed, subbase, subgrade) must be permeable. 60mm thick pavers may be used in pedestrian applications.
- 2. Install edge restraint using concrete curb, concrete toe or edging.
- 3. Place bedding course of No. 8 aggregate 3/8" leveled to grade.
- 4. Install Pavers in closed assembly with spacer on stone for water drainage. Fill joints with gravel. Where required, cut stones with an approved cutter to fit accurately.
- 5. Tamp pavers with mechanical vibrator, uniformly level, true to grade and free of movement. Textured pavers require a rubber pad for the vibrator to reduce scuffing.
- 6. Fill voids in joints by sweeping dry ASTM No. 8, 89 or 9 stones.

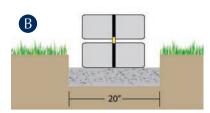

STONEWALL II INSTALLATION*

A. Prepare Base Leveling Pad

Excavate trench 20" wide and 12" deep along the length of wall, assuring depth provides proper unit embedment. On sloped sites, step up 6"

to change elevation. Place 6" of 3/4"-1/2" crushed aggregate in the trench. Level, then compact to 95% or greater of standard proctor.

B. Set & Align Base Course

Starting at lowest elevation, ideally a corner, place and level the block using a string line and 2' level. Follow the suggested patterns as

shown, or create your own. Make sure the recess next to the center core is placed top up. Place alignment plugs into the center core following the guidelines below. Lay out the entire bottom course before proceeding to the next courses. Place perforated drain pipe onto leveling pad, behind base course (retaining wall) then backfill, 12" deep, to top of wall with crushed aggregate. Stack additional courses altering the pattern course to course. Repeat the steps to reach the desired wall.

*The Bayfield and Brisa Retaining Wall Systems can be used for gravity walls up to 3 feet high, including buried course, but excluding the cap. Taller walls can be built with the Retaining Wall System using geosynthetic reinforcement when designed by a qualified engineer. Height assumes level backfill and clean, compacted sand or gravel and no surcharge. The Bayfield® and Brisa® Freestanding Wall Systems can be used for walls up to 3 feet high, including buried course, but excluding the cap.

TYPICAL RETAINING WALL INSTALLATION*

A. Prepare Base Leveling Pad Excavate for the leveling pad. The trench should be at least 12 inches wider than the block you are installing and 6 inches deeper than the height of the block. Use a compactible base material of 3/4-inch minus (with fines) for the leveling pad. The pad must extend at least 6 inches in front of and behind the first course of block, and be at

least 6 inches deep after compaction. If the planned grade along the wall front will change elevation, the leveling pad may be stepped up in 6-inch increments to match the grade change. Start at the lowest level and work upward whenever possible. Compact the aggregate and make sure it's level front to back and side to side. Mist lightly with water before compaction.

B. Base Course

Begin laying block at the lowest elevation of the wall. For quick-leveling, use the Torpedo™ base block with the hand-holds down, or you can remove the rear lip of the block by hitting from the back so it will lie flat on the leveling pad. Place the first block level, front to back and side to side; lay subsequent blocks in the same manner, flush

against each other. Make sure they are in full contact with the leveling pad. If the wall is on an incline, don't slope the blocks; step them up so they remain consistently level. For multiple-piece products, use the largest unit, 18 inches wide, for the base course. Complete the base course before proceeding to the second course. A drainage pipe should be placed at rear base of first course.

C. Stacking and Fill

Place the second course of blocks on top of the base course. Remember to keep the wall on bond by placing units in a staggered relationship to the course beneath. Pull each block forward as far as possible to ensure the correct setback. Backfill with drainage aggregate directly behind the block, adding 6 inches at a time, followed by proper

compaction. Add soil fill behind the aggregate. Compact before the next course is laid. With the top units dry and clean, stack the caps on top of the final row and use a masonry construction adhesive such as Hardscape Zone adhesive

BRISA® FREESTANDING WALL INSTALLATION*

A. Prepare Base Leveling Pad Excavate a trench for the leveling pad to the lines and grades shown on the approved plans. The trench should be a minimum of 24 inches wide and 10 inches deep. Should the grade along the wall change elevation, step the trench up in equal block height increments so as to match the change of grade. Always start at the lowest point and

work upwards. Place a 3/4-inch minus crushed aggregate into the excavated trench; assure aggregate depth is at least 6 inches, and extends beyond the front and back of the block by a minimum of 6 inches. After placing the aggregate into the excavated trench, level the material and compact to 95% standard proctor.

B. Base Course

Place a level string line along the length of a wall and to the back top edge of the desired location of the blocks. Assure that the string is level and at the desired height of the first course of blocks. Begin stacking the blocks at the lowest point in the wall, work upwards by placing the Torpedo™ base block with the hand-holds down to ensure

proper contact with the leveling pad. As the blocks are placed, use a small level to assure that the blocks are level front to back and side to side. Utilize a 4-foot level to assure that a group of blocks are level side to side.

C. Stacking and Capping

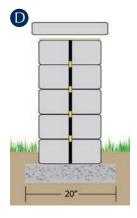

Build the next course and glue to the base blocks. Work from the appropriate side of the pattern as you face the wall. Use 1/2-inch-diameter of glue 3 inches apart in the front half of the block. Build a separate wall on each side of the base unit. Maintain a consistent gap of roughly 1 inch between the parallel walls. Continue to build one

layer of the pattern on each side of the wall, maintaining a uniform distance between the two walls. Check horizontal and vertical levels of each wall. Periodically check the distance between the wall faces to ensure consistent spacing. Gaps will vary on curves. Flip blocks over on curves as needed. This reduces the need to cut blocks. Sweep all debris from the top course. Lay out all the caps onto the wall before gluing. Confirm the blocks are dry, then place a bead of masonry/concrete construction adhesive onto the top course of block, at the front and back of the block and along the entire length of the wall. Place the caps onto the adhesive and into the desired position.

C. 3-Way Alignment Plug (3WAP)

After stacking the block course, place a 3WAP into the core of each unit, assuring that the flange on the plug rests within the recess adjacent to the core. Orient the plug to achieve your desired wall batter. Use the setback position for retaining walls to achieve a 7.3 degree batter, the vertical position for bench walls, and the reveal position to occasionally highlight a unit.

D. Capping the Wall

Adhere clean and dry cap blocks to the wall using silicon concrete construction adhesive. Place cap flush to the wall face or with an overhang.
